

# SPILLBUND PORTABLE SPILL CONTAINMENT PRODUCT RANGE

## Portable Bunding Systems A cost effective environmental solution

Spill bunds provide temporary spill containment in the following applications:

- Temporary storage for drums and storage containers in most locations
- Spill containment
- Wash down applications where contaminated water must be collected
- Drive on drive off fuel transfer bunds for any size tankers and fuel transfer vehicles
- Contamination prevention for a range of products

## Features

Spill bunds can have either air inflated, foam filled side walls or detachable struts to support the wall. All systems are designed for quick and easy deployment. The air inflated bund can be inflated using a compressor, reverse blow vacuum cleaner or a standard blower unit. Both the foam edge and air inflated edge are designed to be driven over by any type of vehicle

Spill bunds are manufactured from a range of materials that are, Chemical & Fuels resistant, oil and fat resistant.

Lightweight and easily stored when not in use (storage bags can be supplied if required)

Easy to clean

Spill Bunds are available in a range of stock sizes for smaller applications but can be manufactured to **any size** to suit your application.
