

FUEL AND WATER STORAGE BLADDERS

Fabric Solutions has a range of Fuel and Water storage Bladders for commercial applications. All of our Fuel and Water storage Bladders are manufactured, designed and fabricated in Australia and installed by us, If required we can **prefabricate to your specifications** and supplied as a self fit item.

The bladders are designed to be freighted cost efficiently and deployed quickly and easily. The bladder shown was manufactured for diesel storage within an existing structure.

Normally, the bladder is manufactured, transported to site and placed in a pre-excavated banded areas that not only act as a support for the bladder but protects it as well

This style of bladder can be made to suit virtually any shape. These bladders are not self supporting, they require supporting structures on all sides.

Fabric Solutions Australia also make a similar type bladder for the storage of water for emergency applications, that require quick and efficient deployment.

These can be manufactured to a capacity of up to 100,000 litres
