

Rural & Commercial Dam Liners

“ Dam liners prefabricated up to 2500 sqm.
Prefabricated flat sheets can be site joined. ”

Not all dams are the same, and with that in mind we supply a wide range of materials to suit most dam lining systems. Standard material ranges are available on our website. Duradam dam liners are designed to withstand tough conditions and last many years. Each dam liner is custom made in our factory to suit your project, and can be prefabricated up to approximately 2500 sqm (depending on material and thickness). If required, multiple flat sheets can be factory fabricated and then joined on site. A quality dam liner will not only prevent water loss, but also prevent chemicals leeching into the water table.

FEATURES

- Durable and UV resistant
- Large projects can be joined onsite
- Prevents leakage from cracks and porous soils
- Prevent chemicals from leeching
- Suitable for long term and short term storage
- Supply or supply and install
- Requires very little maintenance
- Custom made
- Fixtures, pipes, sumps etc can be accommodated
- Resistant to wide range of chemicals

APPLICATIONS

- Dams and reservoirs
- Coal seam gas water storage
- Frac water ponds
- Farm dams
- Secondary containment liners
- Turkey nest dams
- Toxic waste management
- Aquaculture
- Canal and channel liners
- Land fill liner and covers
- Evaporation ponds
- Irrigation
