“ Permanent and temporary solutions to prevent contamination from spills & leaks. ”

Secondary spill containment liners, sometimes referred to as berm liners, are used for the containment of liquids and substances preventing contamination of the environment. They are used for the containment of spills and leaks, most commonly hydrocarbons and other potentially harmful chemicals. FSA secondary containment liners are designed and used as a solution, both for the permanent or temporary containment. A number of polymeric materials are used depending on the chemicals or contaminants involved.

## FEATURES

FSA can produce secondary containment liners to suit almost any situation.

- Temporary or Permanent applications
- For use in almost any terrain
- Can be fitted with drain points and/or collection sumps
- Manufactured from a range of materials that can be chemical, fuel and UV resistant
- Portable Spill bunds also available.
- Can be manufactured to any size
- Prevent contamination

## APPLICATIONS

- Oil, Gas and Chemical Industries
- Mining
- Military
- Food & Beverage Industry
- Transformers and Electrical Equipment
- Waste Management
- Wash down applications
- Servicing of vehicles and plant equipment
- Fuel transfer bunds
- Drive-on drive-off
- Truck and car wash bays
