“ Stop leaves and small animals from entering your inground pool. ”

Pool debris covers (also called mesh or leaf covers) are designed to winterise your pool and keep out debris, leaves and animals. Each cover is custom manufactured and depending on the size of the pool one person can fit or remove a cover. It is secured by straps with stainless steel anchors that are flush with the coping or edge, so when the cover is removed, there is nothing to trip over. The cover is suspended above the waterline, will not collect water only leaves and other large debris. Leaves will now not contact the water and usually blow off in the wind (or can be assisted with a gentle brush or a broom or leaf blower).

Less leaves and debris in the pool also means that the chemical usage will drop, as there is less particle matter to absorb the chlorine. Plus the cover reduces the amount of sun that can bleach out chlorine. Dust and other small particles are still able to enter the pool, so a total pool shutdown is not possible with this system.

FEATURES

- Reduces water evaporation by up to 70%
- Is equivalent to a 500 micron thickness pool cover
- Reduces chemical consumption
- Reduces running time of your filter
- The mesh still allows rainwater in (no water pooling on top), but keeps leaves and debris out
- Rope reinforced edging with stainless steel fittings
- Custom made to fit your pool
- Rocks, Ladders and other features can be accommodated
